## **Soybean-based, Biodegradable, Rust Preventive Oil** *Industrial strong -- environmentally safe*

Alsip, IL -- **Nox-Rust® EV9** is a soybean-based corrosion preventive oil that protects metal parts while in storage and transit, and is safe for the environment. Ideal for mothballing, lay-up and preservation of metal equipment and components, it is a new addition to the family of corrosion preventive liquids by Daubert Cromwell.

Nox-Rust EV9 is formulated with esters of soybean and other organic materials, making it safe for use without special handling or protective equipment. The product is formulated with edible, food-grade soybean oil, highly refined, bleached and deodorized. It will not give off foul odors, and will not stain metal.

Designed as a water-displacing, lubricating oil for industrial use, it reaches voids and recesses of machined metal parts and equipment. Corrosion protection lasts up to 12 months indoors. This low VOC, non-toxic, water-displacing liquid is also completely biodegradable.

Daubert Cromwell is a global provider of corrosion inhibitor packaging products for industry. For complete information, call 800-535-3535, or send an inquiry to [info@daubertcromwell.com](mailto:info@daubertcromwell.com)
