

## *VCI Masking Film Protects Metal Surfaces Against Scratches, Corrosion*

ALSIP, IL -- A pressure-sensitive masking film that protects metal surfaces against scratches, marring, and corrosion is new from Daubert Cromwell, the leading manufacturer of corrosion inhibitor packaging for industry.

Premium Metal-Guard® VCI Masking Film is designed for temporary protection of exposed metal surfaces during all phases of manufacture, storage and handling. It applies easily and peels off without leaving a residue on the protected surface. The strong, transparent film protects the metal against defects and corrosion for months.

To use, apply the film directly to a clean, dry metal surface. The water-based acrylic adhesive is clear, odorless, lightweight and safe. Standard film is tinted a unique shade of blue to identify it as a product of Daubert Cromwell.

Premium Metal-Guard masking film will withstand roll forming, bending, cutting and stamping, making it ideal for use in metal fabrications, metal service centers, doors and trim works, and heavy duty industrial equipment and machines that are stored indoors.

Use it in applications where:

- Metal surfaces need to remain corrosion-free and flawless until ready for use,
- It is labor-intense or impractical to rework, repaint and remove surface imperfections by hand,
- Quality of the finished part is an important part of a quality system.

Available in widths to 80", and perfed on a roll for easy handling.
